Wuffes Dog Joint Supplement Review: Does It Really Beat The Leading Brands?

the Customer Digest

TCD Staff

At The Customer Digest, we only endorse brands and products we love. This is a paid advertisement for Wuffes.

Watching our dog Momo age has been the hardest part of being a pet owner. She just turned 10 and is showing the classic signs of joint discomfort – weak hind legs, slow to stand and lay down, and less interest in play.

If you're like us, you'll do *everything* to keep your pup happy, healthy, and mobile. Fortunately, joint supplements are proven to decrease discomfort and increase mobility.¹

So we reviewed **Wuffes**, a new chewable with high concentrations of five key ingredients and no artificial additives. And we compared it to the long-standing market leaders.

Read on to see Momo's experience with **Wuffes**—and with input from our Veterinarian, **Dr. Joseph Menicucci** (DVM)—how it rates on ingredients, taste/texture, and benefits.

Momo (age 10) has been struggling with joint pain and mobility. We tested three leading joint support supplements to support her joint health.

Joint Supplements Compared:

Here is how the joint supplements compare, based on the daily maintenance dosage for a large dog:

	Wuffes	Leading Brand's Tablet	Leading Brand's Chewable
Glucosamine	2500mg	Less	Less
MSM	800mg	Less	None
Chondroitin	300mg	Similar	Similar
Hyaluronic Acid	42mg	None	None
Green Lipped Mussels	400mg	None	None
Synthetic Additives	None	Yes – dextrose, "artificial flavors"	None
Form	1 soft chew/day	3 tablets/day for the first 6 weeks, 1-2 tablets/day afterward	2 chews/day for the first 6 weeks, 1 chew/day afterward

Based on the daily maintenance dosage for a 120lb+ dog

Wuffes wins with 3-4x the glucosamine and MSM than the leading brand's tablet and chewable. It also features two other mobility support supplements – hyaluronic acid² and green lipped mussels³ – that were not present in either competitor.

Hands-On With Wuffes: Benefits After 6 Weeks

But do those higher quality ingredients and dosages actually matter? We tested **Wuffes** with Momo for 6 weeks and recorded our results. We even got Momo a collar to measure her daily steps.

- **Before starting: 8,000 steps/day.** Before supplementation, Momo struggled to jump up and down on the couch, was slow to stand up, and limped on her hind legs occasionally. We'd have to bribe her to get just two short walks around the neighborhood per day! She mostly slept in her bed or on the couch.
- **Week 2: 9,000 steps/day.** After two weeks of **Wuffes** daily, Momo is hitting 9,000 daily steps. She's more consistent on her walks: she keeps a steady pace, and much less "dragging" her along.
- **Week 3: 10,000 steps/day.** We notice a visual improvement in Momo! Along with her slightly longer walks, she's more active at home: more following me around like she used to, lazing less in bed.
- **Week 4: 11,000 steps/day.** We're taking longer afternoon walks – and Momo has no issues keeping up. After an active day, she still limps a bit, but it's much improved. She actually jumped on the couch last night!
- **Week 5: 12,000 steps/day.** This morning, Momo ran around the park with the rest of the pack! When I took her leash off this morning, she bolted to run around and play with other dogs.
- **Week 6: 14,000 steps/day.** Nothing's going to change that Momo is an older dog. But she's so much closer to her younger self: less stiffness standing up, actual runs around the park, and tail wagging all day long. She's back to standing at attention when she hears her leash come out!

Look, we were skeptical that a joint supplement could transform Momo's health. But after 6 weeks, Momo's back to her best self from a few years ago.

We're so thankful we started **Wuffes** instead of dismissing her joint issues as "old age." And we'll continue to give Momo her chewable each day.

Before **Wuffes**, Momo struggled to run and jump up or down (left); now after **Wuffes**, Momo is showing so much more activity and excitement (right)

The Ingredients: Wuffes Wins With Science-Backed Ingredients + Key Supplements

We've seen the real impact **Wuffes** has had on Momo. Now let's dig into how—and why—it's so much better than the competition.

When evaluating joint health supplements, "ensure they contain the proven joint health promoters glucosamine, chondroitin, and MSM, which target all components of joints that degrade with age," Dr. Menicucci (DVM) tells us.

- **Glucosamine** supports cartilage components and is anti-inflammatory.⁴
- **Chondroitin** slows cartilage degradation.
- **MSM** (methylsulfonylmethane) is anti-inflammatory and strengthens connective tissue.⁵

Wuffes is the only supplement that includes glucosamine, MSM, and chondroitin—plus it uses no byproducts or artificial flavors/fillers.

Wuffes is the only brand that meets the recommended dose of glucosamine – at least 20mg/lb, or 1,200mg for Momo (**Wuffes** has 1,250mg for a dog of Momo's weight).⁶ The Leading Brand's Tablet (600mg) and Chewable (900mg) are too low. The recommended dose of MSM is 50mg/10lb,⁷ or at least 350mg for Momo. **Wuffes** has 400mg MSM, while the tablet only has 250mg, and the chewable has ZERO.

Wuffes is also the only supplement to include hyaluronic acid and green-lipped mussels, proven to lubricate joints, reducing stiffness, lessen pain, and improve joint range of motion in dogs.^{8,9}

Wuffes delivers all three key ingredients, adds natural joint lubricants, and skips the harmful additives found in competitors. It's the clear winner on ingredients.

Wuffles was the only supplement we tested with all three key joint support ingredients and no artificial additives

Taste & Texture: Wuffles Wins With Yummiest Chews

Taste & texture are so important when choosing any dog supplement—not even the best treatment will work if your pup spits it out!

Momo tried all three supplements:

- **Leading Tablet:** Momo refused to take the tablet on its own. When we hid it in a treat, she quickly spit it out. There's no way we could ever get Momo to take the 3 per day needed.
- **Leading chewable:** Momo refused to take the chewable on its own. We crumbled it into pieces and put it in her food, which worked better, but it's still quite a chore.
- **Wuffles:** Momo ate her tablet like a treat—no deception necessary. It's probably a combination of the pork liver and honey flavoring that made **Wuffles** by far the easiest supplement for Momo to take.

Wuffles was Momo's favorite supplement, and also the easiest to dose at just 1 chewable/day for a 68lb dog.

Momo ate Wuffles like a treat

Summary

Which joint supplement is best for your dog? After our testing, we recommend the one that includes all three key joint support ingredients, additional proven nutrients, has no harmful fillers, tastes like a treat—and most importantly—works. That's **Wuffles**.

Dr. Menicucci, our vet expert, agrees: "I recommend **Wuffles** to all my clients with older dogs—its comprehensive blend of joint health ingredients support the structural integrity of joints and alleviate the pain associated with joint issues—and has nothing artificial."

Ready to try **Wuffles**? With TCD, save up to 58%. Wuffles also offers a 90-day guarantee if you're not happy with the results for your dog.
